Reflection

During the creation of the task of creating a voting poll web page, I found myself immersed in the world of HTML and CSS, discovering the dynamic interplay between design and functionality. Starting from scratch, I shaped the layout, tinkering with table structures and form elements to create a cohesive new website that I never could before. The journey led me to experiment with various styles, adjusting font sizes, alignments, and colors to strike a balance between clarity and aesthetics. While the journey has just begun, I've gained a newfound appreciation for the intricacies of web development, realizing the power of code to craft engaging interfaces. As I evolve, I will anticipate delving deeper into this captivating realm.
